🎓 [Google Scholar](#)

Machine learning engineer and PhD researcher with 3+ years of experience shipping applied AI end-to-end: on-device fine-tuned small language models with cloud LLM-API fallback (Gemini, GPT), speech and NLP pipelines (ASR, summarization, translation across 20 languages), and IoT / edge sensor intelligence. Recently built **AIReco**, an AI meeting-assistant, and shipped **CVFlow** ([cvflow.app](#)), a 20-language AI resume platform. First-author of **2 Q1 journals and 5 IEEE conference papers**, with a solid MLOps foundation: LoRA / PEFT fine-tuning, distributed training (DDP), and low-latency vLLM serving on multi-GPU infrastructure. Available immediately for a **machine learning or applied-AI engineering role** to take models from research to production.

KEY ACHIEVEMENTS

- Built **AIReco**, an AI meeting-assistant: an offline sLM fine-tuned with QLoRA plus cloud LLM APIs for transcription, summarization, and translation across 20 languages.
- Shipped **CVFlow** ([cvflow.app](#)), integrating Gemini / GPT for ATS scoring and AI generation across a **20-language UI**.
- First-author of **2 Q1 journals and 5 IEEE conference papers** (GLOBECOM, ICC, VTC); IEEE VTS 2024 Student Paper Award.
- Provisioned and operate a multi-GPU server end-to-end: distributed training (DDP), checkpointing, and vLLM serving in Docker.

EXPERIENCE

Machine Learning Engineer (AIoT)

D'isum Inc.

📅 Oct 2025 – Jul 2026

📍 Tokyo, Japan — Hybrid

- Built ETL and preprocessing pipelines converting raw sensor streams from **50+ engines and 200+ batteries** into analytics-ready datasets (cleaning, segmentation, calibrated chunking).
- Developed and deployed classical ML models for engine sound analysis and battery time-series health monitoring (anomaly and fault detection).
- Designed feature-engineering and evaluation pipelines, benchmarking model families to select the best detector per signal type.
- Built on-device iOS / Android sensor apps (Swift, Java) for real-time data capture and edge inference.
- Deployed models to client systems via Azure cloud services, with input validation, error handling, and monitoring.

Python

scikit-learn

Java

Azure

Generative AI Intern (Summer Internship)

日本AIコンサルティング (Japan AI Consulting)

📅 Summer 2024

📍 Osaka, Japan

- Developed and maintained log data processing pipelines using FastAPI and Flask, with technical documentation managed via Growi.
- Customized AI model source code and integrated LLMs into interactive UIs using Gradio, delivering tailored outputs for internal use cases.

PROJECTS

SensoryHub – IoT Predictive Maintenance SaaS

Team project • 2026 • Remote

- Architected a cloud-native IoT platform end-to-end: ESP32 sensor-node firmware and Raspberry Pi gateways streaming via MQTT into Python / FastAPI microservices (TimescaleDB, Redis Streams).
- ML anomaly detection (Isolation Forest, XGBoost) served via ONNX, with LLM root-cause analysis (SmolLM2) and RAG on the roadmap.
- React dashboards (admin + management), a sensor-capture app, multi-tenant auth (Keycloak), and Kubernetes / Terraform infrastructure.

- Produced research reports on data privacy and the AI industry landscape, contributing insights to support J-AIC's business expansion strategy.

FastAPI Flask Gradio PostgreSQL LLMs

AI / ML Researcher (Doctoral)

YuLab, Hosei University

📅 Sep 2025 – Present 📍 Tokyo, Japan

- Built LLM / sLM reprogramming pipelines (Spec2Llama, Spec2LLM, LLM4Imp) adapting frozen LLMs and compact backbones (SmolLM, Phi, Qwen) for forecasting and imputation on edge, updating **under 9% of parameters** while matching or beating SAITS / TimeMixer baselines; published at IEEE ICCE / ICC 2026.
- Designed graph-constrained multi-LLM ensembles with structural causal models, lifting causal-discovery **F1 to 0.945** (+11 pts over PCMCi) and narrative completeness **5.6×** over a single-LLM baseline.
- Provision and operate the lab's multi-GPU server: distributed training (DDP), checkpointing, and vLLM inference serving in Docker, shared across the team.

PyTorch Hugging Face LoRA / PEFT vLLM CUDA
Docker

ML Researcher (Master's)

YuLab, Hosei University

📅 2023 – Sep 2025 📍 Tokyo, Japan

- Built transformer time-series forecasting models (TAPformer, TSFormer, CNN-BiLSTM) for long-term electricity load forecasting, outperforming standard CNN / LSTM baselines (published in *Internet of Things*, Q1).
- Won the IEEE VTS Tokyo / Japan 2024 Student Paper Award (VTC2024-Fall).

PyTorch Transformers Time-Series GNN

Applied AI Engineer – AIReco

Independent

📅 2025 – 2026 📍 Remote

- Built the ML core of a Flutter meeting-assistant: hybrid routing between an offline QLoRA-tuned sLM and cloud LLM APIs for cost, latency, and privacy.
- Speech-to-text, summarization, keyword extraction, and machine translation across 20 languages on a GCP backend.

Flutter GCP QLoRA Gemini ASR

Adaptable Proactive Resourceful

OWNERSHIP

Co-Founder & Full-Stack Lead

CVFlow ([cvflow.app](#))

📅 2025 – Present 📍 Remote

- Co-built a monetized AI resume platform; owned the AI integration (Gemini / GPT) and product.

Engineering Lead

EKKOU Platform (commercial)

📅 2024 – Present 📍 Tokyo

- Lead a full-stack AI platform: clients, APIs, GPU model serving, and CI/CD.

AWARDS & CERTIFICATES

- IEEE VTS Tokyo / Japan Chapter **2024 Student Paper Award** & Encouragement Award (VTC2024-Fall).
- JICA Development Studies Program (JICA専用講座), 2025.
- Review Committee Member, **IEEE ICECET 2026** (IEEE Italy Section); Reviewer, *Theoretical Computer Science* (Elsevier).
